

ADAPTING THE ENVIRONMENT

Make where you are better for everyone

If someone has problems seeing:

Use colours- the more different and
away from each other- the better

Stronger colours are better

Is it easy to find the correct toilet?

Ask if they want more light or less light

Ask where they like to be in the room

Make space. No things on the floor.

Are there different colours on the door?

Are there different colours on the floor?

Mirrors are not good for them

This way they will understand
everything better.

Let us keep it quiet when they ask.

Physical disabilities

If it is difficult for someone to move, stand
or walk

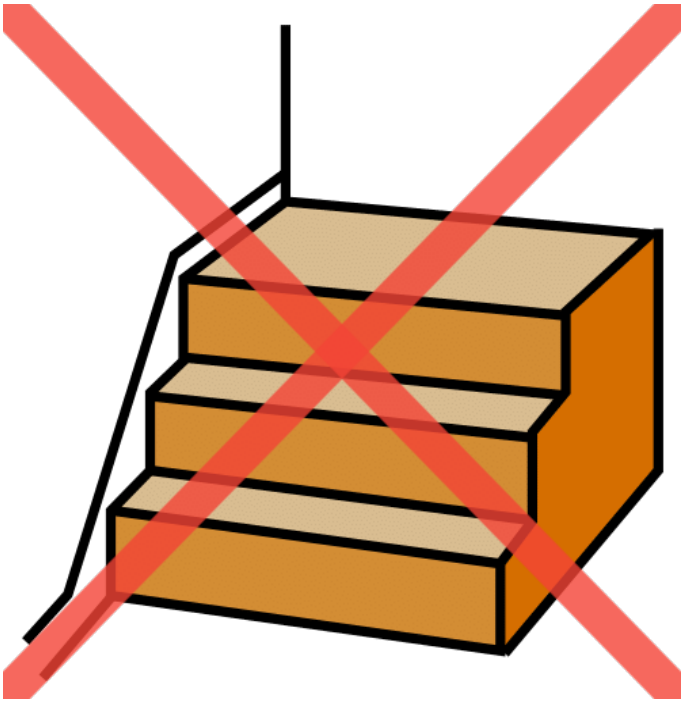

It is different for everyone:

- It can be new to them
- It can be for some time
- It might have always been like this

It may be difficult for them to move
outside or go places.

They might be slower.

If there is a place with stairs,
they may be unable to come.

They might need your help- Ask them

Part Three “Intellectual disabilities”

Make everyone feel safe

If you have to, say what you need more than 1 time

Use pictures if it is easier
